Maybe you need to be a child or a parent to appreciate this book. Maybe I don't appreciate it because I'm neither. Again, maybe I just don't appreciate it, despite the love it seems to get from many others (seriously, I was a little surprised to see all the five-star ratings) because it's not my cup of tea (or a bowl of lima beans), and that's fine, too. Moving on, this is the story of a young girl, Camilla, who loves lima beans but pretends that she is not so other kids do not make fun Maybe you need to be a child or a parent to appreciate this book. Maybe I don't appreciate it because I'm neither. Again, maybe I just don't appreciate it, despite the love it seems to get from many others (seriously, I was a little surprised to see all the five-star ratings) because it's not my cup of tea (or a bowl of lima beans), and that's fine, too. Moving on, this is the story of a young girl, Camilla, who loves lima beans but pretends that she doesn't make the case that other kids don't make fun of her. She cares so much about what others think, she wakes up one day with stripes on her body. Things are getting worse and worse (think Dali), and finally a random old lady suggests Camilla has lima beans and everything clicks back to normal. So I think the moral is to let your freak flag fly. It's a good moral, but telling a story wasn't so good for me. Here's what stands out for me: First of all, it seems like Camilla looks caused by what people are saying, as her condition suggests. It makes sense because she cares so much about what others think. But how did it start? There was no mention of the bands until she woke up striped. Second, some of the basic stories just don't sit right. Camilla doesn't want to ask her father for lima beans because she's already been laughed at. If she's at home with her parents, who's going to laugh at her? And the old lady... How did she know about lima beans? HOW DID SHE KNOW??? I'll say it, at least... I really like the illustrations. I wonder if this is something that everyone loves. Now, if you excuse me, I have a freak flag flying. ... More David Shannon , David Shannon , Camilla Krem loves lima beans, but she never eats them. Why? Because the other kids at her school don't like them. Camilla Cream is very worried about what other people think of her, but at the very moment she most wants to fit in, she becomes completely covered in colorful stripes! Worse, she seems to change colors to match what's going on around her. When a class says an oath of allegiance, it becomes red, white and blue! Instead of fitting in, it's worth it, but it's going from bad to worse. Is there no one who can help Camilla remember what it means to be herself? If the stripes weren't bad enough, Camilla's skin develops all that people assume she is - someone says checkerboard, another says bacteria, and she flashes in a chessboard pattern and bacteria tails. When a doctor, specialists, experts, and many others fail to understand what causes the strip, the little old woman appears with what just might be a cure. Read aloud the video of Ms. CeCe (no advertisement) The main theme of Bad Case of Stripes is learning to be yourself and be comfortable in your own skin... Literally. Philosophically speaking, the book is dedicated to the issue of identity, to rotate in different ways. Camilla is introduced as a girl who is very worried about what people think of her and whether she likes her, and as a result, her sense of self is very malleable. In fact, her insecurities manifested themselves by turning her skin striped. When Camilla goes to school the day after the stripes appear, she and her classmates realize that everything they tell her becomes a pattern on her skin. This continues until one woman, in a misguided attempt to cure her, says Camilla, to become one with (her) room. At this point, Camilla seems to merge with the walls and bed of her room. An attentive reader or listener will understand that Camilla's body is trying to please everyone she meets, making her a victim of the power of suggestion. Whatever they say about her becomes reflected in her, and, subsequently, Camilla realizes that she must be true to herself and her own desires. History raises the question of whether it is important to care about what people think and what the consequences are. At some point, Camilla becomes almost unrecognizable, and though she does not seem to her sense of self, our perception of her changing. So the function of identity rises: is this what one defines for itself or is it something that is determined by others? Throughout the book, Camilla noticeably and physically changes many times. She's always been called Camilla, but it seems that by the time she turned into the walls of her room, it wasn't really the recognizable Camilla on the left. So the question has to be asked: is she still Camilla Cream? The philosophy of personal identity has occupied many minds throughout history, including the philosopher John Locke, who spent a lot of time considering what it means to have an identity. He came to the conclusion that identity is connected with self-consciousness. While this is controversial, the idea of self-awareness persists and is considered in the Bad Case of Stripes. Since she still realizes who she is, even as she transforms into the walls of her room, Camilla, at least in Locke's theory, never loses her identity. An alternative theory of identity is substance. Aristotle believed that all things have necessary and random properties. The necessary properties of that thing require to be that thing; random properties are properties that are true to the thing but are not required in determining this thing. As far as identity goes, the book encourages us to think about what aspects of Camilla's personality are needed and what is accidental. It would seem her physical identity is a casual property as she changes and she still considers herself Camilla. However, the old woman calls Camilla in the female form the real Camilla. Does this mean that her human form is somehow a necessary part of her personality? These are some of the many themes within the philosophy of personal identity. A bad case of bands can also be used to discuss bullying. Camilla teased her classmates and talked about the news, both of which affect her mental and physical condition. Whether what journalists do is a mockery is an interesting question. The media should present the facts objectively, but are there moments when news reports cross the line? The behavior of reporters may seem invasive, but one needs to consider whether journalists really have a moral duty to share stories like Camilla's with the public. The way Camilla's classmates treat her is ethical. Camilla's classmates are a textbook example of children who tease other children, thus acting as bullies. Bullying is a serious ethical issue, but philosophers argue what it is that makes bullying morally wrong. How does bullying hurt someone? What should a person do when he sees bullying? These are the moral questions about bullying presented by Bad Case of Stripes. The bad case of the bands offers a plethora of topics that will be plumbed in the philosophical debate - self-harm, and intimidation. Because of this, one has the ability to adapt reading discussion experience to best benefit students. Camilla Cream loves lima beans but refuses to eat them because people tell her they are gross. When we first meet Camilla, what does she do? What does that tell us about her? Is there food you love but other people don't like? If Camilla loves lima beans so much, why doesn't she just eat them? Is there a reason why Camilla changes from stripes to chessboards to tablets in her room? Is it important to care about what other people think? Do we define ourselves based on who we think we are, or who others think we are? What does it mean to be yourself? It's important? Why? Camilla's identity develops a bad case of streaks that seems to be changing as people try to figure out what happened to her. How does Camilla admit to being Camilla when she's called The Incredible Change Kid? Did she ever stop being Camilla Cream? What is the person's personality? How to develop identity? What does it mean to lose your identity? How could this happen? Can this happen? Did this happen to Camilla? When Camilla returns to the little girl, the old woman says she knew you were out there. What does that mean? Who or what is the real Camilla? Can a person have an entity, a personality defined by things that are important to his or her personality? When reporters start camping outside their home, Camilla becomes something of a media sensation. What does this do to her personality? Other perceptions and bullying Camilla's classmates laugh at her and call her names, and reporters set up outside to gawk at her. What is bullying? Why do Camilla's classmates tease her? Is it okay to treat someone differently because they have stripes? What if they have the disease? On TV show a woman talking about Camilla - what is she doing? Is illness news? Is a reporter obliged to share Camilla's story with the public? Is what a reporter does different from what Camilla's classmates do to her? Is this bullying? Is it ethically wrong to report sensational news? Original questions and guidelines for the philosophical discussion of Joe Fletcher. Edited June 2020 by the Institute of Ethics Janet Pridd.
